PROFILE

Backend Developer with **3 years** of experience in **Python and Django**. Skilled in **RESTful APIs, database optimization (PostgreSQL, Redis), and real-time systems with WebSockets, and NATS**. Proven ability to build **secure, high-performing solutions with optimization and security**.

PROFESSIONAL EXPERIENCE

Backend Developer - Django (contract)

Agrovest

01/2025 – 01/2026

Lagos, Nigeria

- Developed backend systems, optimizing transaction processes and improving speed by **20%**.
- Created RESTful APIs using **Python and Django**, ensuring **modular and scalable application architecture**.
- Maintained and optimized **non-relational databases**, enhancing **data retrieval efficiency** and **tracking of investment cycles and returns**.
- Reduced manual administrative workload by **70%** by **digitizing** investor and farm data processes.

Backend Developer

Upstart / Marketplace

01/2025 – 12/2025

Lagos, Nigeria

- Built a **multi-vendor e-commerce platform** with **real-time notification, secure payment escrow and order management system**, Integrating **Django Rest Framework + Django channels websocket architecture** through **automated notification pipeline** to solve **delayed order confirmation payment verification** and achieved **instant notification delivery (<100ms latency)** with **99.2% message delivery success rate**.
- Integrated **Cloudinary cloud storage** to solve **server storage constraints** and **image optimization** and achieved **70% reduction in image load time** with **automatic CDN distribution**.

Backend Developer - Django(Enyata x Interswitch Hackathon)

MediNexus

03/2026–04/2026

AkwaIbom,Nigeria

- Built a secure **EHR(Electronic Health Record)** platform enabling patients to own and control their medical record with consent management, achieving **immutable** audit logging for every read,write and access event.
- Integrated an immutable audit trail using Django models with insert-only constraints, logging all record lifecycle events (creation,approval, access attempts) for **compliance** and **security**.
- Architected **multi-layer authentication using JWT** tokens and email OTP verification, integrated **Interswitch NIN** verification for patient identity validation achieving **99% patient health data security**.

INTERESTS

Professional Interests — I am passionate about scalable application architecture and microservices development, focusing on high availability and maintainability. I enjoy optimizing RESTful APIs for seamless integration and am committed to data security and efficient management practices. Continuous learning drives me to explore emerging technologies and frameworks, enhancing my backend development skills.

EDUCATION

Bachelor of Engineering in Computer Engineering.
University of Uyo

09/2023 Till present
Akwaibom, Nigeria

SKILLS

LANGUAGES

- Python
- Machine Learning

FRAMEWORKS

- Django
- FastAPI

Database Management

- PostgreSQL
- Redis

Version Control

- Git
- Github

Containerization

- Docker

ACHIEVEMENTS

Backend :

- **Led the development of a scalable and secure database system**, improving data access efficiency by **25%**.
- **Optimized backend code performance**, resulting in a **20%** increase in overall system efficiency.
- **Integrated real-time features** seamlessly, earning positive feedback from users and stakeholders.
- **Resolved complex technical issues** under tight deadlines, demonstrating strong problem-solving skills.
